RFID Overview

Radio Frequency Identification (RFID) is one of the fastest growing technologies in the world today. Its applications are infinite and if you don't have a handle on what it is then you need to attend this important course.

Job applicants who have a working knowledge of RFID will have a distinct advantage in the employment market.

LOGISTICS

RFID Course Outline

This 3.5 hour course will provide an introduction to the technology everyone is talking about in an informative and educational environment.

RFID Course Structure

The Technology

- Gain an understanding of what RFID is and the realities of the technology
- What are the applications & benefits of RFID?
- Learn about active versus passive tags, low frequency to microwave & compliance issues

RFID & Existing Systems

- Compare RFID systems against alternatives such as barcode based systems.
- Will RFID technology make barcodes obsolete?
- Can RFID be integrated into existing systems?
- Standard or proprietary RFID systems and solutions

The Future

- Where we are today and where we are heading
- A look at the limitations of today's RFID technology and how it affects applications
- RFID – mature enough, right time to implement, what is the future?

Deployment & Implementation Considerations

- Learn from case studies that show existing applications in different industries
- Look at financially viable solutions with return on investment in mind
- Where should you start with RFID?

Hans J. Gisch

Educated in Germany, Hans worked as an accountant, systems programmer and systems engineer for various companies. He held the position of Managing Director for one of the world's leading manufacturers of computer systems in Hong Kong and China, before setting up and managing a company, specialised in software and hardware development of Radio Frequency Identification systems.

Hans experience spans many countries including Europe, Australia and Asia. He has more than seven years experience with RFID technology from a training, education, strategic advice, technical, operational, engineering, programming and project management perspective and brings a wealth of knowledge and expertise in relation to the technology.

APICS RFID Tailored 1 Day Workshops

Get the whole picture on Radio Frequency Identification (RFID) in a one day workshop that is specifically tailored for your organisation.

This informative and interactive educational workshop will give your team the knowledge and insight to make informed choices regarding the merit, benefits and opportunities of using RFID.

Have you considered your business case, the feasibility of RFID, how to evaluate vendors, launch a pilot project and how to plan a successful deployment?

Call your nearest APICS Chapter for further information. Price is on application.

APICS also offers courses in:

- CPIM - recognised worldwide as the measurement criterion
- Fundamentals
- Purchasing
- Sales & Operations Planning
- MPS/RCCP
- Demand Management & Advanced Forecasting
- ERP - Supply Chain Management Overview
- Class A Integrated Business Management

NEW:

- Certificate IV in Materials and Operations Management
- Diploma of Business Operations Management
- CSCP (Certified Supply Chain Professional)
