Call for others

- The MMP Server manages users, devices and communications security - all automatically
- Tools are provided to automatically install and deploy device clients
- Login using a highly secure Virtual Private Network (VPN), built right into MMP
- View other on-line users in your designated workgroups
- Exchange documents safely and quickly using our high speed communications protocol
- Instantly send and receive alerts, notifications and messages
- Broadcast messages and documents instantly to all users, on and off-line
- Remotely check status of remote devices without affecting user's work
- Check logs and audits of all this activity in real-time, ANY time
- Install and deploy ALL of this in minutes, NOT days or weeks!

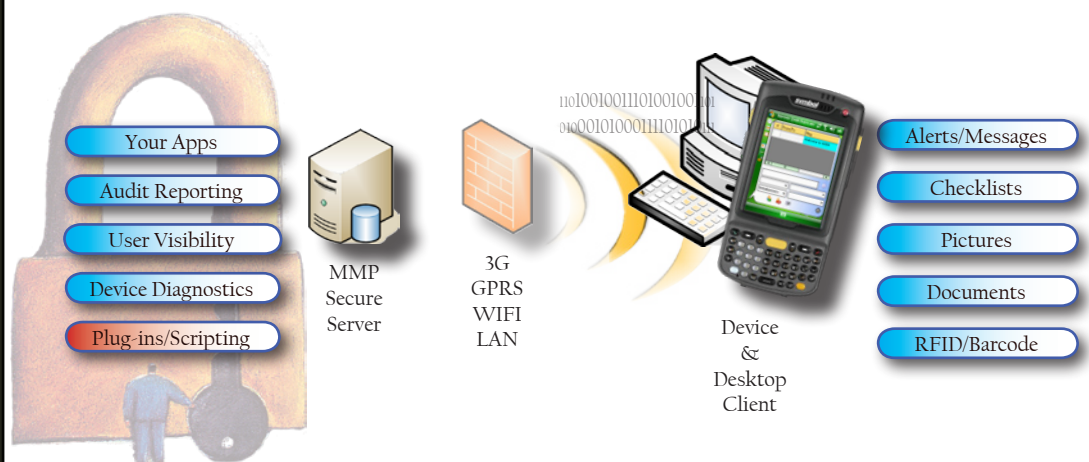

Provision

Secure

Support

- Works on ANY IP network with ANY network provider
- Manage your SIM cards and data communications spend centrally, safely and securely
- Reliable and instant data delivery even on unreliable networks
